Ron,

Per your request, this letter will confirm certain design aspects of the C&C 99 specifically regarding the C&C 99's offshore capability. When the 99 was designed I was the Chief Designer for C&C Yacht. When we designed the 99, we fully expected to export some boats to Europe and therefore we completed the application forms and we did the calculations required for CE approval, Category A. Using the CE approved method for calculating the range of positive stability, which allows the designer to include the deck house structure in a simulated 180-degree roll, the 99's limit of positive stability is greater than 120 degrees. This combined with the other requirements of CE Category A resulted in the 99 being eligible for Category A, Unlimited Offshore Sailing. Ultimately, the company did not export any 99's to Europe, so the application for CE was never processed.

Should you require any additional information, please feel free to contact me.

Regards,

Marine Manufacturing Group, LLC

Tim Jackett, Chief Designer and Operations Manager
